## SecuriVox Launch Speaker Verification Product At US Expo

SecuriVox Ltd, the Dundee-based voice biometric company has successfully launched its speaker verification product at the SpeechTEK 2003 Expo and Conference in New York.

SpeechTEK is the world's premier event dedicated exclusively to speech products, applications and solutions.

The launch of SecuriVox's product, which offers a solution to the problems of identity fraud and password abuse by using the unique characteristics of an individual's voice to confirm their identity, coincides with the general release of the company's speaker verification software development kit (SDK) which will be available in the UK later in the year.

The need to verify the identity of individuals is a growing challenge for industries ranging from financial services to air travel. As the volume of transactions performed online and via telephone continues to increase there is also a need for reliable methods of authenticating remote customers and users.

“SpeechTEK 2003 provided the perfect platform to introduce our product not only to the American market but also to potential customers and partners world wide. The response we received at the exhibition and since our return to Scotland has been fantastic and we are hoping for a similar response at the Biometrics 2003 exhibition in London at the end of October.” said Founder and Chief Technology Officer Andy Sapeluk.

---

SecuriVox Speaker Verification has been designed to deliver a number of key features that ensure effective deployment across the widest possible range of real world applications. In particular, SecuriVox's unique technology delivers text and language independent speaker verification with cross channel capability and high resistance to background noise.

## **ABOUT SecuriVox Limited**

SecuriVox's unique speaker verification technology adds a new level of biometric security to applications ranging from phone banking to automated check-in. Simply by capturing a short utterance you can ensure that an individual is who they say they are, regardless of how they choose to contact you. SecuriVox speaker verification technology protects you and your customers from identity fraud and password abuse while offering potential cost savings by enabling both automated and background verification.

SecuriVox is based in Dundee, Scotland with offices in Edinburgh and London.
